Buffalo, NY | Open to Relocate

EDUCATION

University at Buffalo, The State University of New York

Expected Graduation: Dec 2026

B.S. in Computer Science (Specialization in Software Engineering)

Cumulative GPA: 3.7/4.0, **Dean's List:** Spring 2024, Fall 2024, Fall 2025, Spring 2026

Awards: 4x Hackathon Winner (UCLA, Carnegie Mellon, Stanford) | Honors Scholar | UB Flagship Scholarship

WORK EXPERIENCE

Software Engineering Intern

Buffalo, NY

Linde Gas & Equipment

May 2026 – Present

- Migrated legacy Gas Tracking app to React & .NET, redesigning UI/UX and digitizing & automating core workflows
- Unified 10+ SAP EDI cert-processing repos into a single app, reducing per-client codebases to one for shared feature deploys
- Prototyped OCR pipeline to extract cylinder data from photos to replace manual entry for 200+ cylinders/day
- Automated Accustar & Sentry ticket processing via custom API, eliminating a ~10 min manual step per ticket across 400+ tickets/month

Technical Student Assistant

Buffalo, NY

CAS Educational Technology, University at Buffalo

Nov 2024 – May 2026

- Built CompInfo, a PostgreSQL based asset management system featuring history logging, Excel import/export, and real-time inventory tracking for 2,500+ devices, reducing lookup time by 90%
- Deployed 80+ workstations (imaging, software & hardware setup) supporting faculty/staff onboarding across departments
- Debugged & resolved 250+ tickets, including software crashes and hardware failures

Undergraduate Research Assistant

Buffalo, NY

Embedded Sensing and Computing Lab

Jul 2024 – Dec 2024

- Developed the frontend for Vocal Lens, a tool detecting Specific Language Impairment in children through voice analysis, cutting diagnosis time by 75%
- Built and iterated on the UI through multiple rounds of testing and feedback from 20+ users, improving usability scores by 30%

PROJECTS

Armie [Link]

Cambridge, MA

Arduino Uno Q, BLE, Embedded C++, Servo Motors, 3D Printing, Snap Spectacles

Jan 2026

- Built a mixed-reality robotic surgical arm in 48 hours for surgery training, reducing reliance on \$500-\$3K cadaver specimens
- Programmed Arduino Uno Q firmware with dual Bluetooth services enabling teleoperation and real-time patient vitals monitoring
- Engineered hardware-AR calibration logic to synchronize physical arm movement with AR visualization on Snap Spectacles

Meetwise [Link]

Buffalo, NY

PyTorch, React, MongoDB, Runpod, FastAPI, OpenAI API

Jun 2025 – Aug 2025

- Created meeting intelligence platform eliminating manual notetaking by enabling AI conversational search over past meetings
- Developed secure backend integrating Whisper & Pyannote models for transcription with speaker diarization stored in MongoDB
- Implemented frontend with OpenAI-powered query interface allowing natural language questions to retrieve meeting information

Pehcharm [Link]

Buffalo, NY

React.js, Node.js, Express, MongoDB, APIs, Render, Vercel

May 2024 – Jun 2025

- Developed full-stack platform enabling 100+ users to create portfolios, earning 4.5/5 rating from 20+ testers
- Enhanced portfolio quality with AI feedback & improved UX by providing features like recommendation & profile-views
- Integrated GitHub & Jobs web APIs to fetch user's projects & relevant job opportunities, increasing usability of the platform

TECHNICAL SKILLS

Languages: Java, Python, C/C++, C#, JavaScript, TypeScript, OCaml

Frameworks & Tools: React, .NET, Node.js, Express, FastAPI, Docker, Git, Postman, CI/CD, GCP, Azure, RunPod, Supabase

Core Competencies: RESTful APIs, JWT Auth, Agile/Scrum, Computer Architecture, Security-first Dev
